From X-omics research to clinical practice

3rd X-omics Festival 12 April 2021

Prof. Alain van Gool

Professor Personalized Healthcare
Head Translational Metabolic Laboratory
Lead PI Netherlands X-omics Initiative
Radboudumc Technology Centers
Chair EATRIS Biomarker Platform

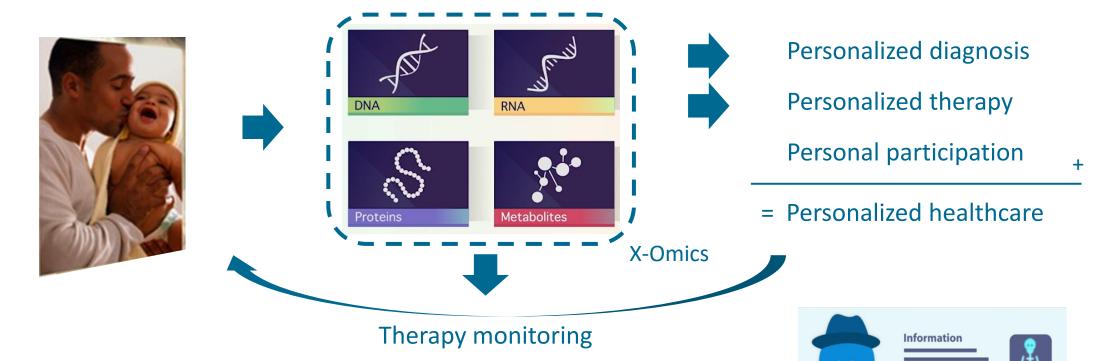

Role of molecular (Omics) biomarker data in Personalized Healthcare

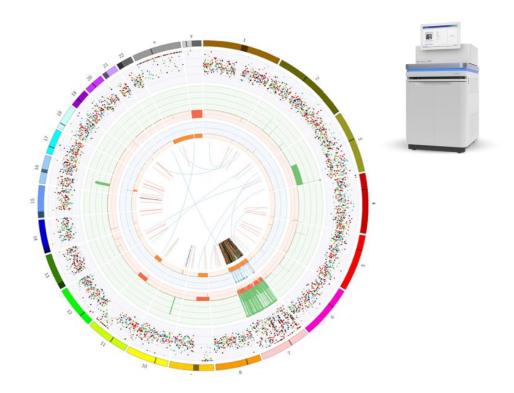

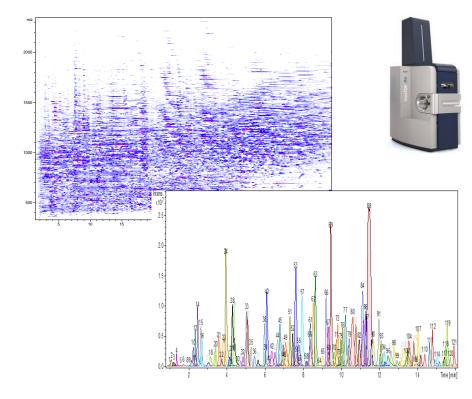

Possible treatments:

The power of omics in molecular analyses

Genomics
Testing 3.000.000.000 DNA bases in 1 assay

{Source: Prof. Edwin Cuppen}

Proteomics, glycomics, metabolomics
Testing of 10.000-50.000 proteins and metabolites in 1 assay

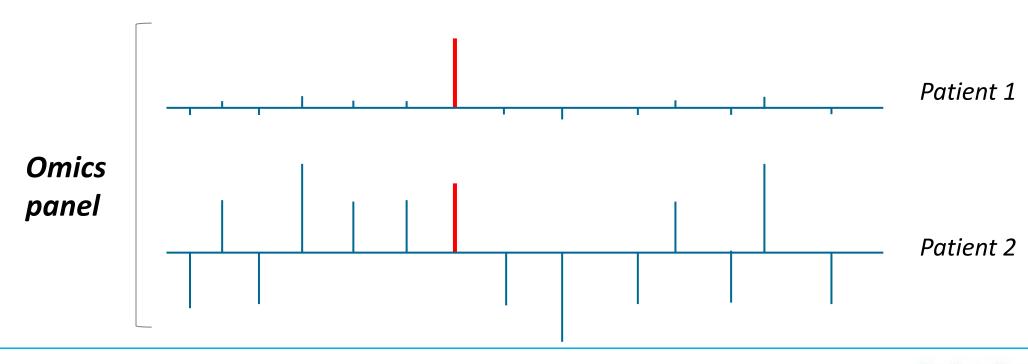

{Source: Translational Metabolic Laboratory}

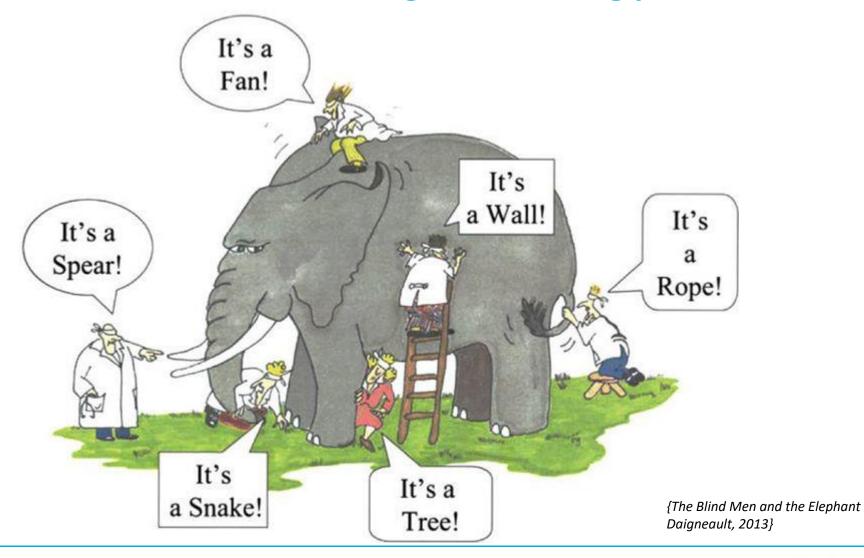

The power of omics in diagnostics

- Higher diagnostic yield
- Contextualisation of change

Integration of clinical omics data will give better big picture

X-omics to drive personalized healthcare

Personalized diagnosis

Genomics

Epigenetics

Transcriptomics

Proteomics

Glycoproteomics

Glycomics

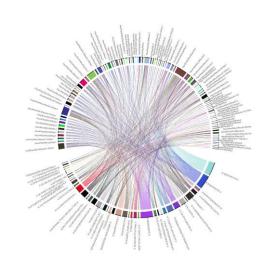

Metabolomics

Cellomics

...-omics

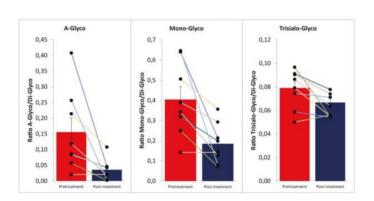

Deep Learning
Artificial Intelligence
System biology

Monitoring new personalized (combination) therapies

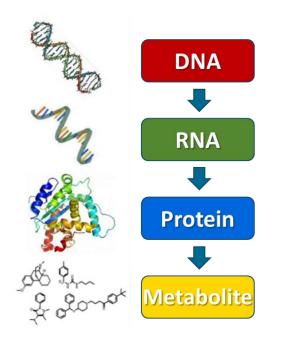

We need to bring clinical X-omics to a higher level

Technologies: Quality, harmonised, standardised, cheaper, higher throughput

Translation: Clinical understanding, regulatory acceptance

- Genomics is quite advanced
- Proteomics, metabolomics (and other omics) much less so

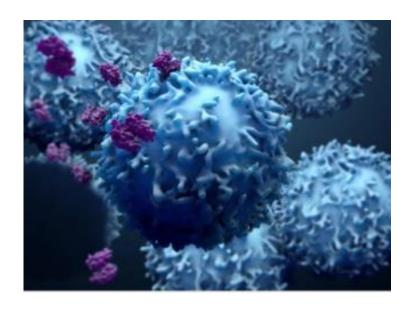

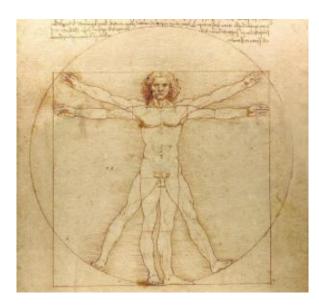

Biology

- 2. Analytics
 - Samples
 - Preanalytical factors
 - Analytics
 - Data analysis
 - Interpretation
- 3. Implementation

Develop and demonstrate impact of robust X-omics analysis

Cell

Individual

Population

15.35-15.55 X-omics highlights and impact:

Alain van Gool (Radboudumc): "From X-omics research to clinical practice."

Lonneke de Boer (Radboudumc): "UMPS deficiency case, the importance of multi-omics diagnostics."
